YOU AND THE COMPANY AGREE AS FOLLOWS

1. PLATFORM

The Company is in the process of developing:

1- a blockchain based, collaborative ecosystem (the "**Platform**") incorporating both a social network and a market place, and allowing all users of the Platform to contribute and share the value that they generate in the ecosystem. Collaboration and value creation is done through the publication and sharing of content, transactions and the exchange of services; and

2- FNP, a token that can be used within specific Existing Ecosystem and on the Platform to

(a) buy products and/or services from business owners and services from users of the Existing Ecosystem and of the Platform,

(b) benefit from special offers, promotional contests and other services and advantages, and on the Platform (c) acquire the status of "ambassador" of a specific business, which allows them the possibility to gain (if a set of condition relating to the promotion of the business by the ambassador is met) up to 20% of the total budget allocated by such business for specific services offered to the business owner on the Platform (knowing that the price paid to acquire the status is refundable) . FNP token can also provide increased buying power within certain PEE and within the Platform as well as generate bonuses to FNP token holder keeping FNPs in their wallet during a minimum holding period from time to time determined by the company.

A platform with similar characteristics as described above has already been developed without the use of the blockchain technology and is currently exploited in Canada. The term "**Platform**" only refers to the platform using blockchain technology and in the process of being developed in order to be exploited in Europe and in other countries (except in North America), excluding the existing platform exploited in Canada.

Further details regarding the Platform are described in the FNP whitepaper (the "**Whitepaper**"), which is available at [WWW.FLIPNPIK.IO]. The information contained in the Whitepaper and on the Company's website is of descriptive nature only, and does not form part of these Terms.

Although the Company intends to develop and exploit the Platform in the manner described above, it reserves the right to modify features, functionalities or development plans at its sole and absolute discretion.

The Company will have primary responsibility for administering the exploitation and development of certain aspects of the Platform. However, it is anticipated that certain affiliates and/or other third parties will provide administrative, marketing, technical and development services to the Company in connection with exploitation and/or development of the Platform.

2. FNP UTILITIES

FNP is a token that will, once the Platform is developed, be used within specific Existing Ecosystem and on the Platform as described in Section 1 above and in the Whitepaper. Ownership of FNP carries no rights, uses or attributes, express or implied, other than those described in these terms and in the Whitepaper.

In particular, you understand and accept that FNP:

a- do not represent or confer any financial right on the economic results of the Company or of the businesses registered on the Platform ;

b- do not represent or confer any ownership right or stake, share or security or equivalent rights, intellectual property rights or any other form of participation in or relating to the Platform, Company and its corporate affiliates or of the businesses registered on the Platform ; and

c- is not intended to be a digital currency, security, commodity or any other kind of financial instrument.

EXHIBIT A
Risks warning

By purchasing, holding and using FNP, you expressly acknowledge and assume the following risks:

Risk of loss of access to a FNP due to loss of credentials

Until it is distributed to the buyer, the said buyer's FNP may be linked to a Company account. You can only access the Company account using the credentials selected by the buyer. The loss of these credentials will result in the loss of the FNP. Good practices advise buyers to store their credentials securely in one or more backup locations that are geographically separated from the work location.

Risks Associated With the Ethereum, Bitcoin and Stellar Protocols

Both FNP and the Platform are based on the blockchain protocols. Therefore, any malfunction, unplanned function or unexpected operation of the cryptocurrencies protocols may cause the Platform or FNP to malfunction or operate in a way that is not expected. Cryptocurrencies like Ether, Bitcoin, Stellar and others cryptocurrencies may themselves lose value in a similar way to FNP, and also in other ways.

Risks associated with the buyer's credentials

Any third party that obtains access to the buyer's credentials or private keys may be able to use the buyer's FNP. To minimize this risk, buyers must protect themselves against people gaining unauthorized access to their electronic devices.

Legal risk and risk of adverse regulatory intervention in one or more jurisdictions

Blockchain technologies have been reviewed by various regulatory bodies around the world, including within the European Union. The ICO has been structured to comply with EU law applicable at the time of the offer.

The operation of the Platform and of FNP may be impacted by the passing of restrictive laws, the publication of restrictive or negative opinions, the issuing of injunctions by national regulators, the initiation of regulatory actions or investigations, including but not limited to restrictions on the use or ownership of digital tokens such as FNP, which may prevent or limit development of the Platform.

Given the lack of crypto-currency qualifications in most countries, each buyer is strongly advised to carry out a legal and tax analysis concerning the purchase and ownership of FNP according to their nationality and place of residence.

Risk of an alternative, unofficial platform

During and following the development of the original version of the Platform, there is a possibility that alternative platforms may have been established using the same open-source code and open source protocol that underlies the Platform. The official Platform may find itself in competition with these alternatives, unofficial platforms based on FNP, which could potentially adversely impact the Platform and FNP.

Risk of a lack of interest in the Platform or distributed applications

There is a possibility that the Platform may not be used by a large number of companies, individuals and other organizations, and that there may be limited public interest in the creation and development of distributed applications. Such a lack of interest could impact on the development of the Platform and, therefore, on the uses or potential value of FNP.

Risk that the Platform is not developed

FNP are meant to be used exclusively on the Platform. The value of the FNP is therefore heavily correlated with the existence of such Platform and network, which has not yet been implemented. FNP may lose part or all of their value

if the Platform is never fully developed, for any reason including economic, financial, political, environmental, social or regulatory events, beyond the control of the Company or not, that may affect the development of the Platform.

Risk that the Platform, as developed, does not meet buyer expectations

The Platform is currently under development and may undergo significant redesign prior to its launch. For a number of reasons, not all buyer expectations concerning the Platform or FNP form and function may be met on the launch date, including changes in design, implementation and execution of the Platform.

A platform with similar characteristics as described above has already been developed without the use of the blockchain technology and is currently exploited in Canada. The term “**Platform**” only refers to the platform using blockchain technology and in the process of being developed in order to be exploited in Europe and in other countries (except in North America), excluding the existing platform exploited in Canada.

Risk of theft and piracy

Hackers or other malicious or criminal groups or organizations may attempt to interfere with the Platform or the availability of FNP in several ways including, but not limited to, denial of service attacks, Sybil attacks, mystification, surfing, malware attacks, or consensus-based attacks.

Risk of security weaknesses in the Platform’s core infrastructure software

The Platform’s core software is based on open source software. There is a risk that the Company team, or other third parties, may intentionally or unintentionally introduce weaknesses or bugs into the core infrastructure elements of the Platform, by interfering with the use of, or causing loss of, FNP.

Risk of weakness or exploitable breakthrough in the field of cryptography

Advances in cryptography, or technical advances such as the development of quantum computers, may present risks for crypto-currencies and the Platform, which could result in the theft or loss of FNP.

Risk of a FNP mining attack

As with other decentralized cryptographic tokens and crypto-currencies, the blockchain used for the Platform is vulnerable to mining attacks, including but not limited to, dual-expense attacks, powerful mining attacks, selfish mining attacks, and critical competition attacks. Any successful attack poses a risk to the Platform, the expected performance and sequencing of the Company’s markets, and the expected performance and sequencing of Ethereum contract calculations. Despite the best efforts of the Company’s team, the risk of known or new mining attacks exists.

Risk of the Platform failing to be used or adopted

While FNP should not be considered an investment, their value is bound to change over time. This value may be limited if the Platform is not sufficiently used and adopted. In such a case, there could be few or no markets at the Platform launch, which would limit the value of FNP.

Risk of a tight market for FNP

There are currently no exchanges or trading facilities on which FNP can be traded. If such exchanges or trading facilities do develop, they will probably be relatively new and subject to poorly understood regulatory oversight. They may therefore be more vulnerable to fraud and default than the established and regulated exchanges that exist for other products. Should exchanges or trading facilities that represent a substantial part of the FNP trading volume be involved in fraud, security failures or other operational problems, the failures of such exchanges or trading facilities may limit the FNP value or liquidity.

Risk of an uninsured loss

Unlike bank accounts or accounts in other regulated financial institutions, funds held through the Company or Ethereum network are generally uninsured. At present, there are no public or private insurance agents providing buyers with coverage against a loss of FNP or a loss of value when buying the FNP token and/or holding it.

Risk of winding-up of the Company's project

For a number of reasons including, but not limited to, an unfavorable fluctuation in cryptocurrency market, an unfavorable fluctuation in FNP value, the failure of business relationships or competing intellectual property claims, the Company project may no longer be a viable activity and may be dissolved or simply not launched.

The Company may enter into forward and/or future contracts in order to hedge any exchange rate risk it may be subject to in relation with the sale of FNP, and in particular the risk that, after converting the cryptocurrencies received during the ICO into Fiat currencies; the Company may not have sufficient fund to refund token purchasers in case the ICO is subsequently cancelled.

The Company may enter into forward and/or future contracts in order to hedge cryptocurrencies fluctuation risk it may be subject to in relation with the sale of FNP, and in particular the risks that if cryptocurrencies devalue; the Company may not have sufficient fund to conduct all of its activities nor to perform its business plan

Risk of malfunction in the Platform

The Platform may be impacted by an adverse malfunction including, but not limited to, a malfunction that results in the loss of FNP or market information.

Unforeseen risks

Crypto-currencies and cryptographic tokens are a new, untested technology. In addition to the risks stipulated above, there are other risks that the Company's team cannot predict. Risks may also occur as unanticipated combinations or as changes in the risks stipulated herein.

Risk related to the financing of the ICO

Each amount received will, immediately upon reception by the Company, be transferred from the bank accounts and/or cryptocurrencies digital wallets of the ICO to the bank accounts and/or cryptocurrencies digital wallets of the Company in order to be immediately accessible by the Company to finance the ICO fundraising as well as the Company business plan including operation development, sales & marketing and administrative expenses.
